## Software Engineer

### *Results-driven Leader with Expertise in Operations, Project Management & Business-driven Data Analysis*

Versatile and experienced analyst offering expertise in software development, operations, and high-level strategic planning. Proven track-record of tracking, managing, and analyzing complex datasets to drive successful business strategy and operational initiatives aligned to organizational objectives. Demonstrated focus on cost optimization, continuous process improvements, and measurable deliverables. Deep technical expertise combined with an understanding of the importance of highly effective data visualization, project management, and data-driven analysis. Collaborative leader continually focused on building relationships to produce highly effective cross-functional teams, increasing productivity, and improving outcomes. Individual dedicated to self-reflection and personal improvement who consistently exceeds performance metrics.
